

HI-MACS® adds sophisticated style to a stunning Bratislava home

DESIGN BY RADO RICK DESIGNERS

It's often the case that what originally starts out as a small task, in the end turns out to be a major project. This was something the owners of a spectacular Bratislava family home soon discovered, when a simple, single room update rapidly turned into a full structural revamp using HI-MACS® solid surface throughout, transforming what was once a bland 1980s building into a cool, contemporary dream home.

With the help and vision of Rado Rick designers, the property now boasts an ergonomically flowing series of high-spec rooms with more than a nod to the suave sophistication of a James Bond villa about them. Various elements, furniture and fittings throughout have been expertly crafted out of HI-MACS® in a variety of calming colours including Alpine White, Steel Concrete, Hercules, Black and Opal. A selection of elements also feature HI-MACS® Ultra-Thermoforming for sleek, curvaceous design. The durable, strong, low-maintenance and mouldable material was the perfect choice for high traffic areas and statement pieces where form meets function thanks to a combination of acrylics, minerals and natural pigments; the ultimate solid surface for any domestic or commercial interior.

Initially, the homeowners approached Rado Rick designers to help them update a room for their youngest son. The result was so successful that another brief followed swiftly after. This time, to create a simple overall revamp of the property in order to make the house more saleable in the future. It was during the concept stage of this interior update that the

HI-MACS® Media contact for Europe:

separate living annexe of a senior family member became vacant, and so the idea was formed to integrate this into the rest of the family home. This was the lightbulb moment where both client and designer knew instantly that the project was moving to the next level.

The reconstruction and renovation took six years in all and has resulted in a beautifully and tastefully designed dream home with style oozing from every inch. The entrance hall is where we first get a taste of the impact which HI-MACS® can create. The extended hallway features a fully mirrored wardrobe block at one end with a seamless handle rail along the entire width, made from HI-MACS® Ultra-Thermoforming Alpine White. The pull handle design is expertly curved and moulded, opening up to reveal compartmentalised drawers within, concealing jewellery and accessories from view. Cabinets within the hallway are also crafted from HI-MACS®, this time in Steel Concrete for an urban, industrial feel.

The cloakroom features a cylindrical basin made from HI-MACS® in Hercules while a Black HI-MACS® countertop provides dramatic contrast.

Upstairs, both bathrooms have undergone a radical redesign and the designers sought innovative and dramatic ways of hiding unsightly yet practical elements from view behind furniture elements of lacquered glass and HI-MACS®.

In the main bathroom, HI-MACS® in Alpine White was used to mould the geometric basin and large shower tray while a mix of Alpine White and the translucent Opal creates unusually shaped open shelving for shampoos and shower gels. Leading up to the second

level with its master suite and family bedrooms, the striking staircase is carefully lit, clean-lined and futuristic with its blocks of Alpine White HI-MACS® that lead to a custom-designed black oak bookcase beyond.

The rest of the property includes equally luxurious surroundings with a master bedroom complete with circular fireplace, freestanding bath and a glass facade at one end, a grand entertaining kitchen and dedicated wine room. The result is, quite simply, breathtaking. It was only a few weeks after completion that the global pandemic of 2020 hit and lockdown measures ensued. With travel prohibited, the owners confirmed that with all the comfort and amenities their home now provides, they barely missed their holiday destinations and their home's reconstruction was one of the best decisions they ever made.

HI-MACS® is the perfect material choice for any project, no matter how large or small. As it can be thermoformed and moulded into any shape, it is widely used for residential and commercial applications and its mix of acrylics, minerals and natural pigments creates a seamlessly smooth, non-porous surface that offers quality, aesthetics, practicality and hygiene with a low-maintenance finish that's easy to clean.

HI-MACS® by LG Hausys

www.himacs.eu

HI-MACS® is a solid surface material that can be moulded into any shape. It is widely used for architectural and interior applications, such as sculptural and high performance wall-cladding or kitchen, bathroom and furniture surfaces, in commercial, residential and public space projects. It is composed of minerals, acrylic and natural pigments that come together to provide a smooth, non-porous and visually seamless surface which meets the highest standards for aesthetics, fabrication, functionality and hygiene – offering manifold advantages over conventional materials.

HI-MACS® provides limitless possibilities for surfacing solutions and inspires creative minds from all over the world. Zaha Hadid, Jean Nouvel, Rafael Moneo, Karim Rashid, Marcel Wanders and David Chipperfield, among others, have completed fabulous projects using HI-MACS®.

At the forefront of innovation as always, LG Hausys recently introduced two new products. First HI-MACS Structura®, a 3D textured panel material that takes solid surface opportunities to a new level. And also HI-MACS® Ultra-Thermoforming, an innovative formula that pushes the boundaries of solid surface shaping to a whole new level, with 30% more thermoplastic capabilities - the biggest innovation for the Solid Surface history since its inception in 1967.

LG Hausys' HI-MACS® uses a simple heating process to give three-dimensional thermoplastic forming capabilities, allows visually seamless designs, offers a virtually limitless range of colours and – for some shades - exhibits a special translucency when exposed to light. Although HI-MACS® is almost as robust as stone, it can be worked in a similar way as wood: it can be sawn, routed, drilled or sanded.

HI-MACS® is manufactured using a new generation technology, the thermal cure. The temperature reached during the manufacturing process sets HI-MACS® apart from other solid surfaces and creates a denser, even more homogeneous, sturdy, durable surface – with a better resistance and superior thermoforming performance.

HI-MACS® does not absorb humidity, is highly resistant to stains, and is easy to clean, maintain and repair.

Countless internationally recognized certificates attest to the quality of HI-MACS® in terms of ecological commitment, hygiene and fire resistance – being the first Solid Surface in the market to receive the official European Technical Approval (ETA) for façades – for Alpine White S728 colour. Furthermore, HI-MACS® has obtained the French QB certification and CSTB ATec “Avis Technique” for facade applications.

HI-MACS® offers a 15-year warranty for products fabricated by a Quality Club Member.

HI-MACS®. Because Quality Wins.
