

## HIMACS launches a new collection of basins

Nine new stylish HIMACS basins to enhance bathroom design

**HIMACS is extending its range by adding nine new versatile basins to its standard bathroom collection.**

The new HIMACS basins collection includes nine attractive models, flush and top-mounted, providing designers with more design options for bathrooms and washrooms, in both residential and commercial settings. In all cases, designers can achieve seamless and extremely hygienic installations thanks to the properties of HIMACS.

Two new squircle top-mounted basins are now available – adding to the existing range which already consisted of square, rectangular and circular shapes. These are designed to sit on top of vanity units or bespoke designed surfaces. The overall range offers design diversity no matter what the project requirements.

# HI·MACS

Mix and match is a very popular option, especially for renovation projects where there is a desire to combine old and new materials and styles for an eclectic design. The warm feeling to the touch which is characteristic of HIMACS and the sleek design of these basins marry

perfectly with other materials and surfaces: natural concrete, warm natural wood or vintage tiles for example.

Seven new flush-mounted models have also been added to the range. These basins are designed to be used with a HIMACS work surface, giving a seamless super hygienic finish. The addition of a HIMACS splashback or full wall covering will complete the flawless design.

HIMACS basin CB5033

A bathroom needs the highest standards of hygiene and functionality - which HIMACS meets with ease. Its completely seamless finish provides a totally smooth surface, preventing the accumulation of dirt, mould and bacteria. Moreover, its resistance to the most aggressive cleaning agents guarantees a long-lasting durability without any discolouration.

All HIMACS basins are manufactured using a high-tech casting process which ensures the highest product quality and maximum design flexibility.

## HIMACS Solid Surface

[www.himacs.eu](http://www.himacs.eu)

HIMACS is a solid surface material that can be moulded into any shape. It is widely used for architectural and interior applications, such as sculptural and high performance wall-cladding or kitchen, bathroom and furniture surfaces, in commercial, residential and public space projects. It is composed of minerals, acrylic and natural pigments that come together to provide a smooth, non-porous and visually seamless surface which meets the highest standards for quality, aesthetics, fabrication, functionality and hygiene – offering manifold advantages over conventional materials.

HIMACS provides limitless possibilities for surfacing solutions and inspires creative minds from all over the world. **Zaha Hadid, Jean Nouvel, Rafael Moneo, Karim Rashid, Marcel Wanders** and **David Chipperfield**, among others, have completed fabulous projects using HIMACS.

At the forefront of innovation as always, LX Hausys recently introduced two new products. First **HIMACS Ultra-Thermoforming**, an innovative formula that pushes the boundaries of solid surface shaping to a whole new level, with 30% more thermoplastic capabilities - the biggest innovation for the Solid Surface history since its inception in 1967. Now, **HIMACS Intense Ultra**, combining the characteristics from two disparate worlds: **Intense Colour Technology** and **Ultra-Thermoforming**.

HIMACS uses a simple heating process to give three-dimensional thermoplastic forming capabilities, allows visually seamless designs, offers a virtually limitless range of colours and – for some shades - exhibits a special translucency when exposed to light. Although HIMACS is almost as robust as stone, it can be worked in a similar way as wood: it can be sawn, routed, drilled or sanded.

HIMACS is manufactured using a new generation technology, the **thermal cure**. The temperature reached during the manufacturing process sets HIMACS apart from other solid surfaces and creates a denser, even more homogeneous, sturdy, durable surface – with a better resistance and superior thermoforming performance.

HIMACS does not absorb humidity, is highly resistant to stains, and is easy to clean, maintain and repair.

Countless internationally recognized certificates attest to the quality of HIMACS in terms of ecological commitment, hygiene and fire resistance – being the first Solid Surface in the market to receive the official **European Technical Approval (ETA) for façades** – for Alpine White S728 colour. Furthermore, HIMACS has obtained the French **QB certification** and **CSTB ATec “Avis Technique”** for facade applications.

HIMACS offers a 15-year warranty for products fabricated by a Quality Club Member.
